JARP Industries Completes Asset Acquisition of Ordered Motion Systems, Expanding Business to Include Large Bore, Telescopic Cylinders

Wausau, WI... JARP Industries, a leading manufacturer of custom hydraulic cylinders, has completed an asset purchase agreement of Ordered Motion Systems, Inc. (OMS), the Wausau-based producer of large bore, telescopic cylinders. Manufactured primarily for the oil and gas industries, these cylinders play a key role in large, complex applications such as mast and substructure raising and walking systems, drilling rig erection, and oil pumping. Their maximum size strokes of up to 90' and bores of up to 40" make them well suited to other markets as well, such as industrial, civil and defense engineering and mobile construction.

"The asset acquisition of OMS complements our current engineering and manufacturing expertise well," says JARP Industries CEO, Kevin Kraft. "It supports our continuing growth in the oil and gas and civil and defense markets, allowing us to focus on repair as well as new cylinder builds."

Incorporated in 1959 in Wausau, WI, JARP Industries (jarpind.com) designs, manufactures and remanufactures custom hydraulic cylinders and other fluid power products for equipment manufacturers in several industries. With two manufacturing facilities totaling 150,000 square feet, JARP produces over 40,000 custom hydraulic cylinders per year. JARP is ISO 9001:2008 registered and is a member of the National Fluid Power Association.

Based in Wausau, WI, Ordered Motion Systems, Inc. manufactures custom hydraulic cylinders and components. OMS products can be found globally on drilling rigs, military applications and USACE civil projects. The company is JCP and ISO 9001:2008 certified.
